

## Louis SIPP - Pinot Blanc

### **Appellation**

Alsace

### **Locality :**

Various plots of land around Ribeauvillé: Straeng, Weinbaum, Vorderer Weibaum....

### **Type of soil :**

The Louis SIPP parcels of land are situated in the geological fracture zone of Ribeauvillé. They constitute a territory which is highly geologically fragmented. They are above all areas with hard chalk, clay and marl from the Liassic and Triassic periods, sandstone clay, and calcareous, chalky conglomerates from the Oligocene period. The area is also characterized by silt-laden deposits, originally loessial, and by glaciais and sandy alluvium in the valley and on the plain. The vines of PINOT BLANC are generally located in areas of heavy and deep soil (Straeng), or in the parts of the vineyard which are late-fruiting.

### **Wine character :**

It has a beautiful yellow color, with glints of green, a very expressive nose offering flavors of citrus fruits and a fine balance. Fruity, fresh on the palate with a good balance. A wine of pleasure.

### **Tips for consuming :**

A very adaptable wine, which is an excellent complement to: cold meats, salads, shellfish, crustaceans, grilled fish, cured fish, quiches, pies, soufflés, white meats, poultry and asparagus.

To be consumed immediately in order to enjoy its fruity and delicately thirst-quenching character.
